

**Copy of e-mail transmission to BP  
regarding Gulf Oil Spill**

**To BP. Thursday, 20 May 2010**

If BP really want to halt the 'Blow-out' then contact me, this is no joke I assure you. But BP will have to pay in advance to a third party, should the idea fail BP gets their money back (minus legal fees) they can't lose but every hour the environment gets progressively worse. I am aware as to your insertion tube tool and that the leak is still ongoing.

For the record I formulated the Worlds 'First Communications High Capacity Super Controller & System' I am a formalist and problem solver. Link to proof document here: <http://tinyurl.com/y CSGU49>  
The way it would be stopped by using my system would be by using the Laws of physics simply by utilising chemistry with nature to force the reactions going on underwater to halt the leak. In brief the formulated system I have (yet to disclose) will only be available by a disclosure agreement. As I have stated should the idea fail BP gets their money back (minus legal fees) they can't lose
